

**Marin County IPM Program
Application for Limited Use Exemption**

Person Requesting: Jim Chayka Date: May 8, 2018

Department: Marin Parks Phone: 415-473-3639

Proposed Material: Acelepryn G EPA Reg. Number: 100-1500

Active Ingredient: Chlorantraniliprole

Amount of material needed: TBD

Location of Use: San Geronimo Golf Course (putting greens and tee boxes only)

Reason why Restricted: Product is on Marin IPM Landscape Use Allowed Products Exemption List, per the County IPM ordinance application of pesticides to turf is restricted. However this product is a reduced-risk pesticide with no signal word, so relative safety to both the handler and environment.

Reason for Need: Given the complex conditions surrounding the management of turf at the golf course, including mowing heights less than 1/8", combined with the winter moisture and fluctuating temperatures, the turf is highly susceptible to a variety of diseases and fungi. Golf course greens are currently being destroyed by cutworms that must be treated, otherwise the greens will experience significant damage making the course unusable.

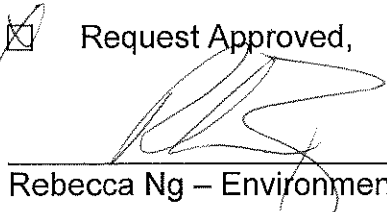

Options/Alternatives: Chitin-inhibiting bait stations may be used as alternative; however, bait stations are not listed on Allowable Pesticide List and similar exemption is required.

Plan to Preclude Future Use: Continue to implement best management practices such as aeration, fertilization, overseeding and top dressing to improve the health of greens and tee boxes.

Time Period Needed: Six months, 5/8/18 through 11/8/18

Request Approved,
